Realistic Test4Engine H35-211_V2.5 Dumps PDF - 100% Passing Guarantee

NEW QUESTION 15

(Radio) Regarding multicast, the following description is incorrect

- * Add Lgmp user under BTV, and by default, multicast users can watch 8 programs.
- * The user-issued Report is captured in the single board logic and sent to the single board CPU
- * Device-based global configurations of Layer 2 groups refer to common parameters of protocols (IGMP

Proxy, GMP Snoop) to all

- * When the igmp match mode disables, you need to configure the multicast program group

NEW QUESTION 16

(Multi-select) esight is a network management software positioned in the enterprise network scenario, which

can view the details of onu devices, including the following information?

- * UNT port information
- * speed
- * Optical module temperature
- * The optical module transmits power

NEW QUESTION 17

(Single choice) The following statement about the PITY protocol is incorrect

- * The PITY protocol includes pity P mode and PITY V mode
- * The purpose of the PITY feature is to provide the upper authentication server with the physical location

information of the access user, and the BRAS device can realize the user account and the press position

after obtaining the user access location information

- * Bind the authentication of the information to avoid the theft and roaming of the user account
- * In pity V mode, the user's physical location information is added to the PPPOE message sent by the user

side to cooperate with the upper-level server for user authentication

- * PITY P mode can also be called PPOE+ mode

NEW QUESTION 18

(Radio) To improve link reliability, the LT device passes through two upstream ports 0/19/0 and 0/20/0

Configure the Timedelay protection group, which of the following commands is optional

- * huawei(config)#interface giu 0/19
- huawei (config-if-giu-0/19)hoffline-tx-off-time 0 500
- * huawei(protect-group-0)hprotect-group member port 0/19/0 role work
- * huawei(protect-group-0)aprotect-group enable
- * huawei(config)=protect-group 0 protect-target sth-nni port workmode timedelay

NEW QUESTION 19

(Single) A total of 100 multicast users on OLT are watching 20 multicast programs, assuming that each

multicast program occupies 2M bandwidth, then how much multicast traffic is currently on the OLT upstream

port

- * 200M
- * 100M
- * 40M
- * 50M

NEW QUESTION 20

The maximum spectroscopic ratio supported by 10G GPON is (Radio) ?

- * 1:64
- * 1:256

- * 1128
- * 132

NEW QUESTION 21

Under the H.248 protocol, if the signaling IP and media IP are both 10. 1 1 100/8, voice gateway is 10. 1 1 1.

When configuring voIP service, the following command is incorrect

- * Using the command ip address media10 in voip mode. 1 1 10010 1 1 1 Configure the media IP
- * Use the reset coldstart command under Voice Interface to make the interface property configuration take

effect

- * Use the if-h248 attributei command to configure interface properties under the voice interface
- * Using the command ip address signaling10 in voip mode. 1 1 10010 1 1 1 Configure the signaling IP

NEW QUESTION 22

(Single-choice) An IPTV user reflects that the TV cannot be watched, open the debug switch on the OLT side, and the debug printing information is as follows: huawei(config).

This can be judged by the results of the query

- * The poN port multicast bandwidth is insufficient
- * The user does not have permission to watch the show
- * IGMP Sakamoto Fussel
- * User bandwidth validation failed

NEW QUESTION 23

The number of users under the OLT can also determine whether the VLA is single-layer or dual-layer VLA.

Single-layer VLANs can be used when the number of users is small, and dual-layer VLANs must be used

when the need to distinguish services and the number of users is second to ().

- * 2K
- * 4K
- * CS
- * 1K

NEW QUESTION 24

The Class D multicast address range is from 224. 0 0 0 to 238. 255 255 255

- * True
- * False

NEW QUESTION 25

Layer 2 enables IGMP-snooping , and when the switch port receives an IGMP join packet, it listens for the packet and adds the corresponding port to the multicast group

- * wrong
- * Right

NEW QUESTION 26

(Radio) In the FTTB/C scenario, ONU is used as an AG device to access the phone, and there is no possible

cause of sound failure for SIP protocol off-hook

- * There are packet losses in the olt upper-layer network
- * The ONU side MG interface status is abnormal
- * The voice server is down
- * ONU and IMS routes are unreachable

NEW QUESTION 27

(Multi-select) Query ppPOE simulation results on the MDU side as follows

From the query results, it can be judged ()

- * The service configuration of ppPoE users is normal
- * PPPoE user account and authentication method are correct
- * The link between MDU tone setting and BRAS is ok
- * The MDU management IP is configured correctly

NEW QUESTION 28

(Radio) When using the siP protocol, you need to use a local number graph for matching, if you use the default

matching mode to match a 7-digit number beginning with 7727, then the following options are available?

The figure is

- * Local-bitmap add huawei normal 7727xxx/7726.
- * Local-digi tmap add huawei normal 772. /7727xxx
- * Local-di gi tmap add huawei normal 7727
- * Local-digitmap add huawei normal 7727xxx/7727

NEW QUESTION 29

The (radio) OLT is configured for V2 on the IGMP version when the OLT receives igmp v3 forwarded from

on-T What kind of treatment will be done after joining the message

- * Normal forwarding
- * Send a specific group query message
- * Send a universal group query message
- * Discard directly

NEW QUESTION 30

In esight's OnT zero configuration deployment, do not provision OLT when incrementally configuring OLT.

- * True
- * False

NEW QUESTION 31

(Radio) The downstream effective bandwidth of the GPON PON port is

- * 2G
- * 1.25G
- * 2.5G
- * 2.2G

NEW QUESTION 32

The DBA scheduling of the GPON system is only for the upstream traffic, and the downstream traffic cannot be scheduled.

- * True
- * False

NEW QUESTION 33

(Single choice) The following statement about defense MAC Spoofing is wrong

- * MAC Anti- Mac Spoofing; features are mutually exclusive with WMAC, SC, PPPOE SMAC features at the VLA level
- * After the anti-MAC Spoofing function is enabled, the system automatically implements the dynamic binding of the AC address to the service flow
- * After enabling the Anti-MAC Spoofing function, for IPoE users using fixed IP, the user needs to be statically configured
- * Turning off the Anti-MAC Spoofing function can only take out the fixed table items, which does not affect the user's service application, but the service forwarding surface will be interrupted.

NEW QUESTION 34

(Single-choice) HSI service uses VLAM tags to bind users precisely, if there are 5K FTTH hanging under the LT Users, which VLAN switching scheme is recommended?

- * User VLAN->C;VLAN->S+CVLAN
- * S+C>S+C
- * c>S
- * C>S+C
- * C>S+C

NEW QUESTION 35

The auto-discovery methods provided by sight are by network segment mode, ARP mode and routing mode.

At the same time, you can create a network segment or IP address of a device that does not need to be

connected as an exclusion list. Automatically skips the network segment or IP address configured in the

exclusion list during self-discovery of devices.

- * True
- * False

NEW QUESTION 36

(Multiple select) When there is a backbone fiber break or OLT does not detect the expected optical signal

(LOS) alarm, the possible cause is that

- * Rogue ONU exists under the port
- * The port backbone fiber is faulty
- * Any power loss or failure under the port
- * The port laser is turned off

NEW QUESTION 37

Under IGMP snooping, there are two users on demand under the OLT- the same program, and the olt sends

two join messages to the multicast router

- * wrong
- * Right
