NO.44 Jon is a new Jira user. He reports that adding comments to Jira isn't working as expected. When he attempts to @mention a user, no list of available users is provided. Because he does not know everyone's username, he is unable to target comments to specific users.

What is the cause of this problem?
* Jon does not have the Browse Users global permission.
* Jon does not have the View Users project permission.
* Jon does not have the correct field security permission for the Comment field.
* The field configuration for the Comment field is not set to Autocomplete Renderer.
Explanation/Reference: https://community.atlassian.com/t5/Jira-questions/Can-t-Mention-other-users/qaq-p/5238

NO.45 Beehive Bank wants to implement Jira with the following requirements:

* Enforce the strictest possible security measures for user logins.

* Allow external users to create their own user logins.

* Use the Jira Internal Directory.

Which two login security options can you offer them? (Choose two.)
* Set Login Mode to Secure.
* Require character variety for the user name.
* Require that a password is not too similar to another user’s password.
* Require a certain length for passwords.
* Require that a password is not too similar to the user name or email address.
Explanation/Reference:

NO.46 Your marketing group is using Jira to track media print advertisements. They would like to track TV and radio commercials as well.

The same team handles all three formats, but each format requires a unique workflow. The team would like to keep everything on the same dashboard, and they will also be using the same permissions, notifications and screens.

Without using third-party apps, how should you configure Jira to meet these requirements?
* Clone the existing project and key for TV and Radio.
* Copy the existing permissions and notification schemes, and associate them with new projects for TV and Radio.
* Create a sub-component hierarchy.
* Create two new projects for TV and Radio.
* Add TV and Radio into the existing project as components.
* Use issue types of Print, Radio and TV in the existing project.

NO.47 Three team members have left the company and their issues need to be re-assigned to various -users.

All of their issues are in the Marketing project which uses the Default Notification Scheme. The scheme has never been updated.

How do you inform the new assignees about their re-assigned issues?
* Add an announcement banner to the marketing project to inform team members.
* Perform a single bulk operation to mention all new assignees in a comment.
* Add an announcement banner to each new assignee’s dashboard.
* Perform bulk operations to re-assign the issues and notify the new assignees.
* Use the Send email feature to inform the individual new assignees.

NO.48 Your user directories are configured as shown:

Directory Name	Type	Order	Operations
Company B (Deprecated)	Microsoft Active Directory (Read Only)	↓	Disable | Edit | Test | Synchronise Last synchronised at 3/16/18 4:49 PM Full synchronisation completed succefully
Crowd Server *(inactive)*	Atlassian Crowd	↑ ↓	Enable | Remove | Edit | Test | Synchronise Last synchronised at 6/19/17 3:18 PM
Company A	Microsoft Active Directory (Read Only)	↑ ↓	Disable | Edit | Test | Synchronise Last synchronised at 3/16/18 4:48 PM Full synchronisation completed succefully
JIRA Internal Directory You cannot edit this directory because you are logged in through it, please log in as a locally authenticating user to edit it.	Internal	↑	Edit

The Active Directory administrators have just started the process of copying all the users from the old Company B directory to Company A directory.

During this process, the group membership is being changed to allow for more fine-grained security control.

A large number of migrated users complain that they do not have the correct new group memberships.

Which configuration change should you perform?
* Reorder the directories so Company A is before Company B.
* Enable the Crowd user directory.
* Reorder the directories so the Jira Internal Directory is listed first.
* Synchronize the Company A directory.
* Disable the Company A directory.
* Disable the Company B directory.

NO.49 Beehive Bank wants to implement Jira with the following requirements:

* Enforce the strictest possible security measures for user logins.

* Allow external users to create their own user logins.

* Use the Jira Internal Directory.

Which two login security options can you offer them? (Choose two.)
* Set Login Mode to Secure.
* Require character variety for the user name.
* Require that a password is not too similar to another user’s password.
* Require a certain length for passwords.
* Require that a password is not too similar to the user name or email address.

NO.50 A dashboard displays an Issue Statistics gadget as shown.

Issue Statistics: Business project with data (Status)		
Status	**Count**	**Percentage**
IN PROGRESS	1	
TO DO	2	
BLOCKED	1	
DONE		
REJECTED	1	
READY FOR QA	2	
Total	8	

The dashboard owner wants to change the order of the statuses shown in the gadget to appear as follows.

1. To Do

2. In Progress

3. Ready For QA

4. Blocked

5. Rejected

6. Done

Which action will permanently arrange the statuses into the required order?
* Reorder the statues on the Status administration page.
* Change the Sort Direction option in the gadget to Ascending.
* Change the category of the statuses.
* Add numbers to the status names to allow them to be sorted in numerical order.
* Change the gadget Sort By field to Total.
Explanation/Reference: https://community.atlassian.com/t5/Jira-questions/How-to-change-order-of-statuses-in-a-Two-Dimension-filter/qaq-p/320423

NO.51 The Release Manager is having problems caused by inconsistent naming of versions across projects. He would like to use a more consistent naming convention.

The developers do not know the naming convention, and are happy to let the Release Manager rename versions when they get the names wrong.

The projects all use the Default Permission Scheme.

Which action would allow the Release Manager to update the versions in the projects?
* Change the Manage Versions permission in the permission scheme.
* Add the Release Manager to the Administrators project role.
* Change the workflow to allow the Release Manager to update versions.
* Add the Release Manager to the developer role.

NO.52 Your administration project is configured as follows:

* there are three issue types that all share a single workflow

* all project users are members of the Project Users project role

* all members of the Administrators project role have the Set Issue Security permission

* project administrators are the only users who can create issues

You are tasked with replacing the Project Users project role with three distinct team project roles, each solely responsible for one of the issue types.

Which additional requirement can be met by individual workflows per issue type?

* The system field Component/s needs to be required when creating two out of the three existing issue types.
* Each issue type needs a dedicated set of individual project components.
* The reporter and current assignee of each issue should always have access to view it.
* Only members of the dedicated teams should be able to view and work on the issues they are responsible for.
* Individual notifications should be sent out depending on the selected issue type.

NO.53 The operations team currently uses the OPS project to track their tasks. They have a new requirement to begin handling change requests. Inspect the partial summary of the current OPS project configuration:

Which two requirements would require creating a new project? (Choose two.)
* Change requests will not use versions.
* Change requests will have different component leads.
* Change requests will have a different workflow.
* Change requests will notify different people for all system events.
* Change requests will require the Due Date field to be populated.

NO.54 You have been asked to take on the administration of a second Jira installation in your company.

You were given the following information about user accounts:

* The company standard is to use Active Directory (AD) to provide user accounts.

* There are several Active Directory systems in use by different business units.

* The second Jira is not to be merged with your main Jira.

* The main Jira system is connected to Active Directory for user accounts.

* The second Jira is using internal user accounts, not Active Directory.

* People using the second Jira are using the same login ID as they would use in Active Directory.

* Your company would like to use Single Sign-on (SSO) but has not yet implemented it for either Jira system.

Which authentication method should you recommend?
* Change the new Jira to use your main Jira's directory services, as that is already reading your Active Directory services.
* Set up a Crowd server to get the user lists from all internal directories and AD, and use AD directly for the password checking.
* Set up a Crowd server to pull in all the AD services, and plan to migrate internal users.
* Change the new Jira to link directly to the required AD servers.

NO.55 Max wants you to change the way the system fields Created or Updated are being displayed when viewing an issue.

How can this be achieved?
* Adjust the Day Format in the Jira look and Feel configuration.
* Adjust the jira.date.time.picker.java.format in the advanced settings configuration.
* Adjust the jira.date.picker.java.format in the advanced settings configuration.
* Adjust the Complete Date/Time Format in the Jira Look and Feel configuration.
* Adjust the language and time zone preferences in Max's user profile.

NO.56 Tom has asked you why the numbers returned by his searches are not right. He shows you three JQL queries:

JQL	Number of Results
project = "Cake baking"	42
project = "Cake baking" and fixVersion = 1.1.0	6
project = "Cake baking" and fixVersion != 1.1.0	22

How can you fix this?
* Change the query to project = "Cake Baking" and fixVersion ~ 1.1.0.
* Change the query to project = "Cake Baking" and (fixVersion is empty or fixVersion != 1.1.0).
* Rename the versions so they do not contain periods.
* Identify the missing issues and change the permissions so that everyone can see them.
* Change the query to project = "Cake Baking" and fixVersion not in (1.1.0).

NO.57 You receive workflow configuration requirements for issues in the Closed status. They are as follows:

* Users must NOT be able to edit issues in this status.

* Jira administrators must be able to edit issues in this status.

* Only users in the release-managers group should see the transition to the Re-opened status Which combination of two workflow configuration items should you use to meet these requirements? (Choose two.)
* Properties
* Post functions
* Conditions
* Validators
* Triggers

NO.58 Which three factors should you consider when deciding between Jira Cloud and Jira Server? (Choose three.)

* the ability to integrate Jira with a cloud-based source repository (e.g. Bitbucket)
* the amount of time required for system administration
* the availability of a REST API
* the commercial apps you would like to use
* the ability to integrate with an external user directory (e.g. company LDAP directory)
* the number of workflows you will require

Explanation/Reference: https://confluence.atlassian.com/cloud/compare-atlassian-cloud-vs-server-744721664.html

NO.59 Your marketing company wants to evaluate Jira and purchased a 10-user license. A frequently changing group of key stakeholders – both internal employees and external customers – will participate in the evaluation.

If the evaluation is successful the company wants all 50 employees to start working with the tool.

You have to manage the frequently changing group of stakeholders and need to make sure only the intended users participate in the evaluation.

How should you meet these requirements?
* Create and manage the users for stakeholders manually in the internal directory.
* Connect Jira to your internal LDAP directory and whitelist the IPs of stakeholders.
* Enable public signup and CAPTCHA but limit account creation to stakeholders.
* Disable public signup and grant all project permissions to Group Anyone.

NO.60 You have just deployed a new Support Workflow and Support Notification Scheme. Manager Maria should be receiving notifications when users click the Escalate workflow transition, but she is not.

Identify two possible reasons Maria is not receiving the notifications. (Choose two.)
* Maria is not listed in the right custom event of the Support Notification Scheme.
* The Escalate workflow transition is firing the wrong event.
* The right custom event has been deleted from the Support Notification Scheme.
* Maria is not listed in the Issue Escalated (System) event of the Support Notification Scheme.
* The Escalate workflow transition is firing the right event, but the event is marked Inactive.
* The Escalate workflow transition is firing the right event but uses the wrong email template.
