### Exam Preparation of SAP E\_HANAAW\_17: SAP Certified Development Specialist - ABAP for SAP HANA 2.0

The questions during the examination are more on the practical side and candidates have to address the real-world problems rather than just answering the theoretical questions. Hence, the best preparation for the exam is to have hands-on experience with SAP E\_HANAAW\_17 and it becomes more important for the candidates to have experience of working on live projects that enables them to handle and manage the SAP E\_HANAAW\_17 system very closely, and empowering them with practical knowledge and practical implementation. Candidates can also review the **E\_HANAAW\_17 exam dumps** to gain access to the research materials and engage in the requisite SAP Learning Room and acquire the necessary practical information and go through the numerous dos and don'ts when planning for and accessing the test. Candidates may also review and follow numerous teaching materials accessible on the internet, like **E\_HANAAW\_17 exam dumps** and advice from candidates who have either taken or passed the test. This will have a perfect picture of how to study for the test.

**Q92.** What is the language SAP HANA is developed in?

- \* Assembly
- \* O
- \* C++
- \* Java

**Q93.** AM DP can detect 3 types of syntax errors in active or inactive source code. What are these errors ? There are 3 correct answers to this question.

- \* UNION specific syntax errors
- \* Database platform syntax errors
- \* Database independent syntax errors
- \* HANA specific syntax errors
- \* SQLScript errors

**Q94.** Which of the following is true?

- \* ABAP
- \* OSQL
- \* Oc#
- \* Java

**Q95.** You want to implement business logic on the database layer.

Which approach do you follow when implementing an ABAP Managed Database Procedure?

- \* The Left-Right approach
- \* The Near-Far approach
- \* The Top-Down approach
- \* The Inside-Out approach

**Q96.** What are the features associated with ABAP CDS? There are 3 correct answers to this question.

- \* Create
- \* Export
- \* Update
- \* Read
- \* Distribution

**Q97.** You want to define an ABAP Core Data Services (CDS) view that totals the NET\_AMOUNT column for each sales order (column SOJD). Which SELECT statement would you use in the definition? Please choose the correct answer.

- \* select from snwd\_so {so\_id( sum(net\_amount) as sum\_amount) order by sojd
- \* select from snwd\_so {so\_id( sum(net\_amount) as sum\_amount) group by sojd
- \* select from snwd\_so {sojd, sum(net\_amount) as sum\_amount}
- \* select from snwd\_so {so\_id( sum(net\_amount) as sum\_amount) group by net\_amount

**Q98.** What must you take into consideration when you use the new open SQL syntax (available as of SAP Net weaver 7.4 SP05)? There are 2 correct answers to this question.

- \* All arithmetic expressions can be used for all type of variables
- \* All ABAP variables must be escaped with a proceeding @ sign.
- \* All Keywords are case sensitive.
- \* All fields in the GROUP BY clause must be separated by commas.

**Q99.** Which form of services is responsible for defining and consuming semantically rich data models. Please choose the correct answer.

- \* Core Data Services
- \* ITe services
- \* Conditional services
- \* Modell-ll services

**Q100.** What are the Possible Approaches with AS ABAP < 7.4 SP02? There are 2 correct answers to this question

- \* SQL units
- \* Consume using native SQL
- \* Stored Procedures
- \* Interaction with Database

**Q101.** You analyse SQL Monitor data in transaction SQLMD. You know that program X accesses database table Y.

You made sure that program X was executed while the SQL Monitor collected its data. But the relevant database access is NOT listed in SQLMD.

What could be the reason?

Note: There are 3 correct answers to this question.

- \* SQL Monitor was activated for a specific application server
- \* SQL monitor was activated with a filter that excludes database table Y
- \* The data has NOT yet been transferred to the SQL monitor database tables
- \* Program X was executed in the background.
- \* Database table Y is a buffered table.

**Q102.** What are best practices when programming in ABAP for SAP HANA? There are 2 correct answers to this question.

- \* Calculate aggregations using ABAP code on the application server to limit database load
- \* Eliminate nested SELECT statements to reduce the overall number of database accesses
- \* Use a column list in the SELECT clause to ensure that you only read a column if it is really required
- \* Use repeated SELECT SINGLE statements to ensure that you only read a row if it is really required

**Q103.** Which of the following options is not the main capability of SAP BusinessObjects Analysis for OLAP? Choose the correct answer

- \* Create data by members and tables
- \* Insert filter components
- \* Swap axes
- \* Create Presentations

**Q104.** What is the purpose of an ABAP project in ABAP Development tools for Eclipse? (2 right answers)

- \* It provides access to all ABAP repository objects in an ABAP system.
- \* It represents the connection to an ABAP system
- \* It represents the connection to the SAP HANA server
- \* It is used to transport ABAP repository objects

**Q105.** You are using a calculated column COUNTS within your Dimension Calculation View and an aggregation node. This is the data that goes into the aggregation node:

- \* AT Vienna 11

AT Vienna 15

DE Berlin 13

DE Berlin 13

\* AT Vienna 11

AT Vienna 15

DE Berlin 13

\* AT Vienna 26

DE Berlin 26

\* AT Vienna 11

DE Berlin 13

**Q106.** Which of the following ABAP transactions can you use to detect SQL performance optimization potential in your ABAP code? 2 ans

\* SQLM

\* SE09

\* SWLT

\* ST22

\* SE3S

**Q107.** You have an SQLScript procedure with a table input parameter it\_books. You want to use the parameter on the right-hand side of an assignment operator within the procedure. How do you refer to the parameter? Please choose the correct answer.

\* :it\_books

\* it\_books

\* {it.books}

\* @it\_books

**Q108.** What are the advantages of column based tables? (3 correct answers)

\* Bigger Data Set

\* Better Compression

\* Better parallel Processing

\* Faster Data Access
