

Free 365 Days Exam Updates C-IBP-2305 dumps with test Engine Practice [Q23-Q47]

Free 365 Days Exam Updates C-IBP-2305 dumps with test Engine Practice
Updated Verified C-IBP-2305 dumps Q&As - 100% Pass Guaranteed

Q23. What is a prerequisite for modeling outsourced manufacturers with production capacity using the Supply Optimizer?

- * Use production lead times and offsets to manage components at the outsourced manufacturing location
- * Ensure that the outsourced manufacturing locations have a separate subnetwork
- * Model target inventory and stocks at the outsourced manufacturing location
- * Model relative production costs across internal locations and outsourced manufacturing locations

Q24. Which of the following checks for master data and key figures does the Check Mode algorithm trigger? Note: There are 3 correct answers to this question.

- * It checks whether the location products specified in the master data are connected by customer sourcing rules within the supply chain network.
- * It checks whether the location resource specified in the master data forms a cycle in the supply chain network.
- * It checks whether the sourcing in the Production Source Item Master Data type exists.
- * It checks whether the heuristic detects cycles formed by nodes (such as location products) in the supply chain network.
- * It checks whether the required planning level master data exists for a subset of input key figures.

Q25. What are the relevant use cases for helper key figures?Note: There are 2 correct answers to this questions.

- * Used at any level of calculation level except the Request Level
- * Used when you have more than three inputs at different planning levels in one calculation
- * Used by end-users in planning views to help visualize cross-period calculations
- * Used to break down a large calculation into manageable subcalculations

Q26. Which conditions have to be fulfilled as a prerequisite to maintain a key figure disaggregation?Note: There are 2 correct answers to this question.

- * The key figure is calculated and system editable.
- * The key figure is stored and all editable.
- * The key figure is stored and system editable.
- * The key figure is calculated and all editable.

Q27. Which of the following are valid use cases for using the Realignment App?Note: There are 2 correct answers to this question.

- * Changing customer sources and reassigning customers to new DCs
- * Removing outliers from the sales history of a reference product before transferring its sales to a new product
- * Using the realignment run to identify obsolete data
- * Merging two locations into a new location

Q28. Which sets of chart types are provided within the Analytics Advanced application?Note: There are 3 correct answers to this question.

- * Comparison Chart Types
- * Seasonal Chart Types
- * Trend Chart Types
- * Geographic Chart Types
- * Simulation Chart Types

Q29. The S&OP Operator Profiles app is used to configure different types of algorithms.Which algorithm-specific settings are unique for only the Time Series-based Supply Optimizer?Note: There are 2 correct answers to this question.

- * Time profile level
- * Discretization
- * Processing mode
- * Global cost factors

Q30. Which of the following data can be tracked using a change-history-enabled key figure?Note: There are 3 correct answers to this question.

- * Key figure type
- * Modified date
- * Scenario ID
- * Reason code
- * Attributes

Q31. What does ABC/XYZ segmentation allow you to do?Note: There are 2 correct answers to this question.

- * Substitute missing values in case of sporadic demands.
- * Use forecasting algorithms that are specific to seasonal demands of SKUs in the segment “B”.
- * Identify inventory items that require closer attention.
- * Choose time-independent key figures as segmentation measures.

Q32. Which SAP IBP planning operator can be run to delete planning objects in a certain version?

- * Purge Key Figure Data
- * Purge Key Figure Data Outside Planning Area Planning Horizon
- * Purge Non-Confirming Data
- * Purge Master Data

Q33. Model configuration allows the attributes of a master data type to be assigned as key figures. Which features are relevant for this type of object?

- * This type of key figure is not usually stored and it cannot be set to editable.
- * This object is not exposed to the user in planning views or modeling.
- * This object contains user-defined criteria that monitor the running of business plans.
- * This object provides a single value for a unique planning combination.

Q34. You need to create time periods for the time profile in a planning area. What should you be aware of when running the Create Time Periods application job?

- * The assigned Planning Area must be active.
- * This application job can be run for multiple time profiles at once.
- * In the Parameter Section of the application job, choose the Time Profile ID and Planning Area.
- * A time profile has to be activated so that the application job can proceed.

Q35. How many different time levels can be selected within one planning view?

- * Only base time levels of the planning area
- * All time levels available in the time profile
- * All time levels available in the time profile, restricted by global configuration parameter
- * Only time levels from the base planning level of selected key figures

Q36. What are the S&OP operator (optimizer) parameters associated with demand fair share?

- * Number of fair share segments Additional tiering costs (default) Number of fair share segments late delivery
- * Number of fair share segments Additional tiering costs (default) Inventory days of supply
- * Number of fair share segments Maximum days of coverage Number of fair share segments late delivery
- * Number of fair share segments Additional tiering costs (default) Maximum inventory

Q37. Which applications are present in the sample model SAPIBP1? Note: There are 3 correct answers to this question.

- * Demand Driven Replenishment
- * Response Planning
- * Sales and Operations Planning
- * Inventory Optimization
- * Demand Sensing

Q38. You need to define a new logic for a key figure to drive values from the PERPRODCUSTREGION level to the PERPRODCUST level. Which of the following configuration options are possible for this process? Note: There are 2 correct answers to this question.

- * Splitting the values from aggregated to detailed level, based on the time profile attribute
- * Splitting the values from aggregated to detailed level, based on a stored split-factor key figure
- * Splitting the values from aggregated to detailed level using multiplication by the proportions
- * Splitting the values from detailed to aggregated level by using a copy operator

Q39. You need to use your resource cost effectively with a certain minimum use, even if it means producing more than demand. Which solutions would apply to this scenario? Note: There are 2 correct answers to this question.

- * Capacity leveling will be possible for production and storage resources.

- * Balance can be achieved between excessive prebuild and minimum use by incorporating violation costs.
- * Excess stock can be generated and will need to be staged in an overflow warehouse.
- * Minimum capacity utilization will result in pull production occurring.

Q40. Which type of Master Data will be represented by the Master Data Type LOCATIONFR?

- * Virtual Master Data Type
- * Reference Master Data Type
- * Compound Master Data Type
- * External Master Data Type

Q41. What do you need to be aware of when using multiple pairs of key figures in one copy operator? Note: There are 2 correct answers to this question.

- * Copying multiple key figures can be processed sequentially.
- * If necessary source key figures values are disaggregated.
- * Copying multiple key figures on different planning levels is not possible.
- * If necessary target key figures values are disaggregated.

Q42. For your project, you create a new planning area and consider how to create analytics and alerts for it. How can you create these objects?

- * Use the option for copying analytics and alerts into the new planning area from the existing custom planning area.
- * Create analytics and alerts in the new planning area from scratch using the Intelligent Visibility application.
- * Use the option for copying analytics and alerts when creating a new planning area from the sample SAPIBP1.
- * Merge analytics and alerts into a new planning area from any sample planning area.

Q43. Using the import/export functionality means working with groups of items that are organized into collections. What is the best practice for managing collections?

- * Configuration items should be bundled in the collections based on the SAP IBP project stream.
- * A planning area with its time profile must be bundled in one collection.
- * A planning area with the copy operators assigned must be bundled in one collection.
- * You should delete collections after they have been transported.

Q44. Which sourcing methods are required to identify the product flow through the network? Note: There are 3 correct answers to this question.

- * Sourcing via Costs
- * Customer Sourcing Rule
- * Sourcing via Production
- * Unspecified Sourcing
- * Sourcing via Demand Prioritization

Q45. You are adding a value-based filter to a planning view. Which of the following conditions apply? Note: There are 3 correct answers to this question.

- * You can only apply one value-based filter per planning view.
- * The alerts dashboard is not available if a value-based filter is set for the open planning view.
- * You can add (or delete) planning objects to a planning view after these filters are applied.
- * These filters can be used together with attribute totals in the same planning view.
- * These filters are always applied based on the values stored in the database.

Q46. You define fixing for a key figure. Which of the following functions are available for this key figure? Note:

There are 2 correct answers to this question.

- * Fixing is possible for manually editable key figures.
- * Fixing is possible for a certain period, including all child values in the hierarchy.
- * Fixing is possible for a certain quantity of a key figure value.
- * Fixing is possible for system editable key figures.

Q47. You want to display and edit data in different Units of Measure (UOM). Which of the following must you consider before you use the UOM? Note: There are 3 correct answers to this question.

- * Units of measure are usually not time-dependent.
- * Unit of measure is an attribute of a master data type, such as Product.
- * Units of measure are usually not time-independent.
- * Analytics provide the user with the option to select the target unit of measure.
- * Conversion to the target unit of measure is handled by SAP IBP Excel UI
